

MOLECULAR BRAIN RESEARCH

A section of Brain Research devoted to the
publication of molecular studies

Bethesda, MD 20205

Dear Dr. Nirenberg:

I was quite interested in the study you presented at the recent Society for Neuroscience meeting in Dallas. As you know Brain Research will initiate a new section, Molecular Brain Research, with a distinguished Editorial Advisory Board. The first issue of this new journal is scheduled for early 1986. It is my impression that the subject of your study would be suitable for publication in Molecular Brain Research. I hope that when you have prepared the study for publication you will submit it for review by our Editorial Board for consideration of publication in Molecular Brain Research. Directing your study to the general neuroscience community that reads Brain Research and its various sections should greatly enhance the awareness of investigators interested in brain mechanisms to the important new field of molecular neurobiology.

Sincerely,

Dominick P. Purpura
